

## Outdoor Redundancy Switch Unit 2:1

This picture shows an outdoor switching unit of a 2:1 redundant switching system. The switching unit is connected to the control unit, which is installed indoors. Within the outdoor switch unit, alarm and status indication via LEDs, manual switchover and easy access to the serial control interfaces of the converter units is possible. The picture below shows a typical 2:1 configuration with upconverters, built as an outdoor solution.
